More pigs will be bred completely without antibiotics

With 12,5 million DKK from the Ministry of Environment and Food Danish Crown is the initiator for a project to investigate how to reduce the need for antibiotics in Danish pig production.

The consumption of antibiotics in pig production contributes to the formation of resistant bacteria. A new project should therefore reduce the use of antibiotics in the pigsties. The Ministry of Environment and Food has given 12,5 million DKK for the project together with the industry and research institutions to ensure more knowledge about antibiotic free breeding. The goal is that there will be 1,5 million pigs bred without antibiotics in 2021.

- I'm very keen to reduce the consumption of antibiotics in Danish pig production. In the past, the government has launched initiatives to prevent livestock MRSA, and with this project we take an important step towards raising many more pigs without the use of antibiotics, says the Minister of Environment and Food, Esben Lunde Larsen. The pigs will not receive antibiotics from birth till slaughtering. If a pig gets sick and require treatment, it will get it, but this means that it will be slaughtered and sold as an ordinary conventional pig.

1,5 million pigs without antibiotics in 2021

Danish Crown, Techinal University of Denmark, University of Copenhagen, Staten Serum Institute and the agricultural knowledge center SEGES have joint forces in this project. The Ministry of Environment and Food contributes through Green Development and Demonstrations Programme (GUDP) with 12,5 million DKK. The overall budget is 15,5 million DKK.

-It is only two and a half years ago Danish Crown started with the first attempt with antibiotic free pig production (ABF – AntiBiotic Free) and this year we will already slaughter approx. 200.000 ABF pigs. This project is intended to ensure continued growth in the production of OUA pigs and to widen the experience of OUA producers, so that the consumption of antibiotics is reduced widely in beef production, says Danish Crown CEO Jais Valeur.

The project will run until June 2021, and it is expected that in 2021 there will be produced approx. 1.5 million. pigs without the use of antibiotics. Today, Denmark produces 17 million. slaughter pigs per year.

The ABF-project gives us a solid and knowledge based fundation for the future production of ABF-pigs. At the same time, we gain valuable knowledge and experiences that we can translate into concrete tools that can be used to boost the health of the pigs in other production, says Christian Fink Hansen, Director of Pigs Production in SEGES.
